**SECOND SEMESTER EXAMINATIONS: 2014/2015**

**MTEN 314: Ceramics Processing Principles (3 Credits)**

**Time Allowed: 3 hours**

**Answer Question ONE (1) and ANY OTHER TWO (2) Questions**

**Q1.** A ceramics manufacturing company is to start the production of semi-vitreous sanitary wares. As the Ceramics Engineer of the company, you are to provide a suitable body composition for the sanitary ware. The company has access to the following raw materials: Saltpond kaolin, Mouri feldspar, Eikwe silica sand, and Anfoega plastic clay.

- a) Using the feldspar-kaolin-silica triaxial diagram in Figure 1, suggest a body composition from the range of semi-vitreous white ware, and add 20 % of plastic clay to the composition. *[10 marks]*
- b) With the aid of a flow diagram, describe the various steps encountered in the processing of the body from raw materials preparation to the fired ware; and briefly explain the role that each of the raw materials play in the manufacture of the sanitary wares. *[10 marks]*
- c) Discuss the five (5) phenomena (phase transition) that occur during the firing of the wares from room temperature to the maturing temperature of 1280°C. *[10 Marks]*

Fig. 1: Feldspar-kaolin-silica Triaxial diagram

(Leucite-mullite-cristobalite portion of the K<sub>2</sub>O-Al<sub>2</sub>O<sub>3</sub>-SiO<sub>2</sub> phase diagram)

- d) Calculate the chemical composition of your suggested sanitary ware body. The chemical analysis of the raw materials involved is given in Table 1.

Table 1: Chemical Analysis (%) of the raw materials involved.

Raw material	SiO <sub>2</sub>	Al <sub>2</sub> O <sub>3</sub>	Fe <sub>2</sub> O <sub>3</sub>	CaO	MgO	K <sub>2</sub> O	Na <sub>2</sub> O	TiO <sub>2</sub>	L.O.I
Eikwe silica sand	98.0	0.4	0.62	---	0.03	---	---	---	---
Mouri feldspar	73.92	14.61	0.13	0.18	0.05	6.66	4.16	0.01	0.28

<b>Saltpond kaolin</b>	42.21	38.91	0.58	0.18	0.03	0.69	0.02	0.01	13.37
<b>Anfoega Clay</b>	67.0	15.86	3.43	3.04	0.96	3.64	3.61	0.56	5.24

[10 marks]

- e) Using the calculated chemical composition of your body, work out the mineralogical analysis of the sanitary ware, given the following information for your calculation?

**Table 2: The Chief Minerals Present in the Raw Materials**

<b>Minerals</b>	<b>Formula ("ideal"unsubstituted)</b>	<b>Molecular Weight</b>
<b>Kaolinite</b>	$\text{Al}_2\text{O}_3 \cdot 2\text{SiO}_2 \cdot 2\text{H}_2\text{O}$	258.17
<b>Soda mica</b>	$\text{Na}_2\text{O} \cdot 3\text{Al}_2\text{O}_3 \cdot 6\text{SiO}_2 \cdot 2\text{H}_2\text{O}$	764.43
<b>Potash mica</b>	$\text{K}_2\text{O} \cdot 3\text{Al}_2\text{O}_3 \cdot 6\text{SiO}_2 \cdot 2\text{H}_2\text{O}$	796.65
<b>Quartz</b>	$\text{SiO}_2$	60.10
<b>Hematite</b>	$\text{Fe}_2\text{O}_3 \cdot 3\text{H}_2\text{O}$	213.70
<b>Rutile</b>	$\text{TiO}_2$	79.90
<b>Calcium phosphate</b>	$3\text{CaO} \cdot \text{P}_2\text{O}_5$	310.30
<b>Potassium carbonate (pearl ash)</b>	$\text{K}_2\text{O} \cdot \text{CO}_2$	138.10
<b>Sodium carbonate</b>	$\text{Na}_2\text{O} \cdot \text{CO}_2$	106.0

**Table 3: The Oxides Involved with their Molecular Weights**

<b>Oxides</b>	<b>Molecular Weight</b>
<b><math>\text{SiO}_2</math></b>	60.10
<b><math>\text{Al}_2\text{O}_3</math></b>	101.90
<b><math>\text{Fe}_2\text{O}_3</math></b>	159.70
<b><math>\text{CaO}</math></b>	56.10
<b><math>\text{MgO}</math></b>	40.30
<b><math>\text{Na}_2\text{O}</math></b>	61.98

<b>K<sub>2</sub>O</b>	94.20
<b>TiO<sub>2</sub></b>	79.90
<b>P<sub>2</sub>O<sub>5</sub></b>	142.0

**Table 4: Conversion Factors for Calculation of the Mineralogical Analysis**

<b>Constituent Sought</b>	<b>Found As</b>	<b>Conversion Factor</b>
i. Soda mica (Na <sub>2</sub> O.3Al <sub>2</sub> O <sub>3</sub> .6SiO <sub>2</sub> .2H <sub>2</sub> O)	Na <sub>2</sub> O	12.33
ii. Potash mica (K <sub>2</sub> O.3Al <sub>2</sub> O <sub>3</sub> .6SiO <sub>2</sub> .2H <sub>2</sub> O)	K <sub>2</sub> O	8.46
iii. Alumina (Al <sub>2</sub> O <sub>3</sub> )	soda mica	0.400
iv. Alumina (Al <sub>2</sub> O <sub>3</sub> )	potash mica	0.384
v. Kaolinite (Al <sub>2</sub> O <sub>3</sub> .2SiO <sub>2</sub> .2H <sub>2</sub> O)	Al <sub>2</sub> O <sub>3</sub>	2.534
vi. Silica (SiO <sub>2</sub> )	soda mica	0.471
vii. Silica (SiO <sub>2</sub> )	potash mica	0.452
viii. Silica (SiO <sub>2</sub> )	kaolinite	0.465
ix. Quartz (SiO <sub>2</sub> )	SiO <sub>2</sub>	1.0

*[20 marks]*

Q2. Discuss the transition of feldspar from the parent rock to the formation of gibbsite sheet.

*[20 marks]*

Q3a. Even though the actual formation of BaTiO<sub>3</sub> involves many different intermediate phases, we can write the final reaction as:

How much barium carbonate and titanium dioxide should be ball-milled and calcined if we want to make 1000 kilograms of BaTiO<sub>3</sub> ceramic from BaCO<sub>3</sub> and TiO<sub>2</sub> ?

Chemical Formula	Formula Weight
Ba	137.36
C	12.0
O	16.0
Ti	47.90

[5 marks]

Q3b. *"Underlying many of the properties found in ceramics are the strong primary bonds that hold the atoms together and form the ceramic material".* Discuss this statement. [15 marks]

Q4. *"The history of human exploitation of materials is the history of advancement and growth of civilization."* Relate this statement to the foundation of the ceramics discipline and the complex nature of ceramic materials. [20 marks]
